

Cool Down Trailers

Airgas On-Site Safety Services, Inc. Cool Down Trailer are large trailer mounted units with 325 gallon water containers and large port-a-cool mounted on the front of the trailer. 20 foot benches are positioned on each side of the trailer. The port-a-cool unit, as opposed to enclosed air conditioner units prevents the drastic change in the temperature environments and allows fresh cool air to be circulated to workers. Airgas On-Site Safety Services offers cooling trailers that are in compliance with OSHA's Campaign to Prevent Heat Illness in Outdoor Workers. Each of our cooling trailers has a 48-inch Evaporative Cooling Unit which will lower the outside temperature by 25 to 30°.
